

HVAC Systems—Scalable system solutions for maintaining ideal temperature, humidity and CO₂

Optimized Equipment—Ductless, DX, Unitary, Air Handling, Terminal, and Chilled Water Systems

Building Automation Systems—Making precise control easier, mobile and data-rich

Intelligent Services[™]—Monitoring and analytics to optimize your building and minimize unexpected downtime

Energy Services—Managing your energy supply and demand to reduce cost, optimize performance and improve sustainability

Building Services—Reliable, preventative and proactive scheduled maintenance and repair by factory trained technicians

Rental Systems—Promptly provides temporary, scalable HVAC and power from standard applications to complex solutions

Education

Creating highly desirable schools

Buildings play an important role in education. In schools that are comfortable, quiet, properly ventilated and well lit, student attendance is better, test scores are higher, and teacher retention increases. Now that many parents have a greater say about school choices, districts are becoming competitive over school environments. Outward aesthetics create the first impression. Beyond gleaming floors and fresh paint, schools are full of hidden potential. At Trane, we'll tap that potential to help you achieve a multitude of goals: Reducing basic operating costs so that budgets can be better prioritized. Meeting student and parent preferences for sustainable schools. Leveraging technology to maintain ideal learning conditions.

Trane goes beyond... with creative solutions for education

Trane offers a holistic approach to making school buildings a more valuable resource. We've moved into new spaces in building performance; adding expertise in innovative and emerging areas such as renewable energy, digital connected technologies, and strategic energy supply and demand management.

Our approach to your schools begins with a few mission-level questions: What are your challenges? What do you want to achieve? Then, we'll bring your buildings into the strategy.

Struggling with your budget? Dig deeper to reduce energy costs.

Managing the annual energy expense is still one of the most productive ways of reducing operating costs. Today the energy landscape is going through a transformation. Now we're going beyond energy efficiency, to managing your energy supply. Trane's capabilities cover purchasing strategies, sourcing, storage, consumption and overall grid network efficiency.

Need to engage students in science and technology? Think sustainability.

Using Earth's resources responsibly is everyone's responsibility, and even kids want to make a difference. Trane has many ways to make your buildings greener. Our energy education programs and sustainability dashboards help students understand how their actions make a difference, while building interest in science and technology through hands-on experience.

Wondering how to reduce operational costs and risks? Optimize energy supply and demand.

Controlled temperature, indoor air quality and acoustics elevate student performance: Trane solutions create environments that help students stay focused. Over the long term, spaces need to be flexible to accommodate changing uses and requirements. As a leader in connected buildings, we're using technology to create safer, more flexible, healthier and more comfortable schools where students thrive.

Let's go beyond...

We're combining industry experience, efficient equipment, connected building technologies and comprehensive energy services to make schools stronger.
